

HIDE AND HAIR is the revolutionary new hair growth product from Natural Solutions For Livestock. Not only has it been shown to grow hair but it encourages skin health which is essential for optimum hair growth. HIDE AND HAIR contains kelp and seaweed which has been shown to lower body temperature. Cattle will potentially take the higher or hotter temperature better when going to a show. This new product comes in granulated form, is extremely palatable, and best of all it contains no melatonin. HIDE AND HAIR is the first of its kind designed to be administered 60-90 days before show, with optimum results at 90+ days. When cattle are hitting that 90 day mark on Hide and Hair they are showing that explosion of hair.

A bucket of HIDE AND HAIR will last 45 days per head. Hair runs in 45 day cycles so you could start seeing results in as little as 45 days. This is a great tool to help with your success, but always remember daily hair care and management play an important roll as well. HIDE AND HAIR has no melatonin so you can not use it too long. With melatonin, there is a point where hair comes to a peak, then hair goes down hill and is hard to recover. With HIDE AND HAIR you are able to plan multiple peaks with a more consistent hair growth over a longer period of time without the valley. It is also great for skin and hair health, so you can administer it for a longer period of time without the negative results.

HIDE AND Hair

CUTTING EDGE TECHNOLOGY

- RESEARCH BASED
- FIELD TESTED
